PROFESSIONAL SUMMARY

Full-Stack Engineer with deep frontend specialization and **5+ years** of experience building **performance-sensitive, scalable** React applications for enterprise products. Delivered measurable impact - including **50% faster load times, 40% boost in user engagement**, and **99.9% system uptime** across production systems. Strong expertise in **React architecture, state management, reusable component** design, and **frontend system design**, with hands-on experience collaborating across backend, product, and UX teams in complex distributed systems.

SKILLS

Frontend: React.js, JavaScript (ES6+), Next.js, TypeScript, Redux, React Query, React-Virtualization, Custom Hooks, Component Architecture, Performance Optimization, HTML5, CSS3, Responsive Design, Material UI, Tailwind CSS.

Architecture & Design: Frontend System Design, Scalable UI Architecture, API Contract Design, DOM Manipulation.

Backend : Node.js, Express.js, REST APIs, SQL, Oracle, PL/SQL, TypeORM, Prisma, PostgreSQL, GraphQL, AWS, Web-socket, Socket.io, Web-Hooks, JWT Auth, OAuth 2.0, SSO, Input validation & sanitization, XSS/CSRF mitigation.

Tools & Practices: Git, CI/CD Pipeline, GitLab, Jenkins, Debugging & RCA, Webpack, Data structure and algorithms.

Testing: Jest, React Testing Library, Unit Testing and E2E (Cypress/Playwright).

AI & GenAI: Azure AI Agent, OpenAI API (GPT-4o-mini), LLM integration, Prompt Engineering, Chain-of-Thought (CoT) reasoning, Model Fine-tuning.

WORK EXPERIENCE

Blue Yonder (Panasonic) | Software Engineer I

Feb 2023 - Present | Hyderabad

Merchandise Operation product development | React.js, TypeScript, Node.js, REST APIs, SQL, Type ORM

- Led frontend development for a **Competitive Pricing Module** in the Merchandise Operations domain, building **20+ enterprise screens** using React and Material UI, reducing manual pricing efforts by **~35%** and accelerating time-to-market for new product configurations.
- Designed and **optimized** a **high-traffic product** landing page displaying tabular data with 15-17 attributes per product, implementing debounce search, filtering, and pagination - cutting average page interaction time by **40%**.
- Applied advanced frontend optimization techniques (memoization, controlled re-renders, efficient table layouts) to improve rendering speed by **50%**, resulting in a significantly smoother UX across data-heavy screens.
- Integrated **60+ REST APIs** with robust client-side validation (**io-ts**) and error handling, reducing frontend data related bugs by **30%** and ensuring secure, reliable API consumption.

Data Integration platform | REST APIs, SQL, Node.js, Express.js, Type ORM, PLSQL, GenAI, AI Agent

- Independently **designed and developed backend APIs** for a data integration platform handling product data exchange between systems. Designed validation layers using **TypeScript type guards** and runtime checks, for **processing - catching bad data** before it hit production.
- Created timezone handling middleware for international payloads, normalizing timestamps from different regions to prevent **date/time mismatches across distributed systems**.
- Developing an **AI-powered** invoice automation pipeline by integrating **Azure AI Agent** with **BlueYonder** - enabling intelligent PDF extraction, staged business validation, and automated PO/Vendor/Product creation at scale.

Infosys | System Engineer

Jan 2021 - Feb 2023 | Pune

- Developed and maintained **React-based** user interfaces for a secure banking platform, focusing on **responsive design, component reusability**, and **cross-browser compatibility**.
- Integrated frontend applications with **REST APIs** for third-party banking services, collaborating with backend teams to ensure secure data flow for **50K+ users**.

PROJECTS

FASAL MITRA | React, Node.js, TypeScript, MongoDB, Socket.io, TensorFlow

[Live URL](#)

AI-powered multilingual agriculture platform for Indian farmers

- Architected and developed a **full-stack multilingual (English/Hindi)** agriculture platform serving Indian farmers, featuring crop disease identification, live mandi price tracking, and **AI-powered plant diagnosis** using Hugging Face **LLM** inference API.
- Implemented JWT authentication with **access/refresh token rotation using HTTP-only cookies**, and built a real-time expert consultation system using **Socket.io with crop-specific chat rooms** and live typing indicators.
- Integrated **Razorpay payment gateway** with server-side signature verification for secure fertilizer/pesticide e-commerce with **multi-seller price comparison**.
- Consumed OpenWeatherMap and Data.gov.in APIs to deliver **location-based irrigation alerts** and live market prices, improving actionable insights for farmers.

Mise | Next.js, TypeScript, PostgreSQL, Prisma, OpenAI, Gemini Vision, Upstash Redis

[Live URL](#)

AI-powered recipe SaaS platform with pantry scanning and personalised recipe generation

- Architected full-stack platform using **Next.js 15 App Router** with server components and **ISR - integrating** MealDB's recipe database alongside **AI-generated recipes stored in PostgreSQL** via Prisma on Neon serverless.
- Built **AI pantry scanner using Gemini Vision API** to identify fridge ingredients from photos, feeding into OpenAI **GPT-4o-mini** for personalized recipe suggestions with match percentage scoring and missing ingredient detection.
- Implemented production security - **Clerk auth with DB user sync, Upstash Redis rate limiting**, server-side API key protection, and ownership verification on all mutations.
- Designed scalable component architecture with strict TypeScript, parallel data fetching, skeleton loaders, error boundaries, and full mobile responsiveness across all routes.

EDUCATION

- Bachelor of Engineering (B.E) | Computer Science
(M.P) - Jul 16-Apr 20

UIT RGPV - Bhopal
